The *Object Class Name* dialog.

Summary

This dialog allows the designer to specify a meaningful name when creating a new *Net Class* from selected component nets in the design workspace.

Access

The dialog is accessed from the PCB Editor, in the following way:

1. Select one or more components in the workspace, whose nets you wish to group together into a new net class.
2. Right-click over the component (or one of the components in the selection) and choose the **Component Actions » Select Component Nets** command from the context menu.
3. Right-click over an object in the selection and choose the **Net Actions » Create NetClass from Selected Nets** command from the context menu.

Options/Controls

- **Class Name** - use this field to give the new net class a meaningful name.

After clicking **OK**, the new net class will be created, with the selected component nets added as its members. Browse the class in the *Object Class Explorer* dialog, or from the *PCB* panel, configured in **Nets** mode.
