

Sheet Symbol with Duplicate Entries

Modified by Jason Howie on May 8, 2015

Parent category: [Violations Associated with Components](#)

Default report mode:  Error

Summary

This violation occurs when a sheet symbol contains two sheet entries possessing the same name.

Notification

If compiler errors and warnings are enabled for display on the schematic (enabled on the **Schematic - Compiler** page of the *Preferences* dialog) an offending object will display a colored squiggle beneath it. A notification is also displayed in the *Messages* panel in the following format:

Sheet Symbol with duplicate entries Sheet Entry *<Identifier>* at *<Location1>* and *<Location2>*,

where:

Identifier is used to represent the offending sheet entry. The identifier appears in the format SheetSymbolName-SheetEntryName(SheetEntryIOType).

Location1 is the X,Y coordinates for the first violating sheet entry.

Location2 is the X,Y coordinates for the second violating sheet entry.

Recommendation for Resolution

Change the name of the offending sheet entry object as required, either by editing the name in-situ, or by double-clicking on the offending sheet entry and editing the **Name** field in the corresponding *Sheet Entry* dialog.
